This is a short document that sums up how to get the sample app up and running.

First of all - all its data resides in Coloring Book Demo App folder:

There are two areas you could play with - both managed via Coloring Controller Script

1. Coloring Pages
2. Color Palette

When you add new pages - the colouring pages browser will include them. When you add new color - yes, they will become visible on the color picker pallette.

Its just the beginning - you can add some other asset store packages like Lean Touch (to handle pinch zoom) or various Save&Export ones (to save your work in the Phone Gallery). Enjoy!
